Mathematical analysis is the branch of mathematics dealing with limits and related theories, such as differentiation, integration, measure, infinite series, and analytic functions.. These theories are usually studied in the context of real and complex numbers and functions. Analysis evolved from calculus, which involves the elementary concepts and techniques of analysis.

Spline fitting or spline interpolation is a way to draw a smooth curve through $n+1$ points $(x_0, y_0), \dots, (x_n, y_n)$. Thus, we seek a smooth function $f(x)$ so that $f(x_i) = y_i$ for all i . In particular we seek n cubic polynomials p_0, \dots, p_{n-1} so that $f(x) = p_i(x)$ for all x in the interval $[x_i, x_{i+1}]$. Property 1: The polynomials that we are seeking can be defined by
