This is the second tutorial of our PIC Tutorial Series. In our previous tutorial Getting started with PIC Microcontroller: Introduction to PIC and MPLABX, we learnt the basics of our PIC microcontroller, we also installed the required software and purchased a new PicKit 3 programmer which we will be soon using. Now we are ready to get started with a simple blinking Program using ...

PIC projects may utilize Real time operating systems such as FreeRTOS, AVIX RTOS, uRTOS, Salvo RTOS or other similar libraries for task scheduling and prioritization. An interesting project by Serge Vakulenko adapts 2.11BSD to the PIC32 architecture, under the name RetroBSD. This brings a familiar Unix-like operating system, including an onboard shell environment, to the microcontroller ...

How to Use PICKit3: This tutorial is about how to use a burner for programming of pic microcontrollers. I have already posted a article on how to use MikroC for pic microcontrollers in c. The programmer is a debugger system used for software and hardware development of Microchip PIC microcontrollers. The debugger system executes on the actual device because instead ...

Here we will do PIC to PIC communication for demonstrating the working of PIC's MSSP module in SPI mode. One microcontroller will be configured in Master mode and the other in Slave mode. In this example we have bidirectional communication between two PIC microcontrollers. 8 bit switches and 8 LEDs are connected to each microcontroller.
