Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, certain unifying concepts consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as the basic unit of ...

The first sign of philosophy of biology becoming a mainstream part of philosophy of science was the publication of David Hull's Philosophy of Biological Science in the prominent Prentice-Hall Foundations of Philosophy series (Hull 1974). From then on the field developed rapidly. Robert Brandon could say of the late 1970's that "I knew five philosophers of biology: Marjorie Grene, David ...

Metaphors in biology are often encountered in the description of cell structure and function. Describing the cell as a "city" is a case in point as it offers a good opportunity to get students thinking about the structural and functional details of their knowledge as well as to require them to "think outside the box." With this tool, they will not simply memorize definitions, but will ...
